

## **Claims**

What I claim is:

1. A front motorcycle stand comprising
  - a. a supporting base comprising two upwardly disposed parallel members with an upper end and a lower end, each of said parallel members having a wheel attached to said lower end to facilitate rolling along the ground; said supporting base also comprising two forwardly disposed horizontal frame members with a forward end and a rearward end attached to said lower end of said upwardly disposed members; a transversely disposed cross member attached to said forward end of each of said horizontally disposed members to rigidly affix said horizontal members to one another; a handle attached to said cross member for leveraging end of said supporting base;
  - b. an upper support frame comprising two upwardly disposed frame members with an upper end and a lower end, said frame members rigidly connected at said upper ends by a cross member; a rearwardly disposed motorcycle support member rigidly attached to said cross member; a vertically disposed steering head pin rigidly affixed to said motorcycle support member for mating with the steering head of said motorcycle;
  - c. means for pivotally and adjustably attaching said supporting base to said upper support frame.
2. The stand of claim 1 where said pivotal and adjustable attaching means further comprises
  - a. a pair of transversely disposed hollow members attached to the upper end of said supporting base;
  - b. a pair of transversely disposed pins adjustably attached to the lower end of upper support frame ; said pins fitting inside said hollow members to allow pivotal movement;
